

Network Installation Instructions

Wavefunction Software

(Spartan Parallel Suite, Spartan, Spartan Student,
Odyssey Student, Odyssey Instructor)

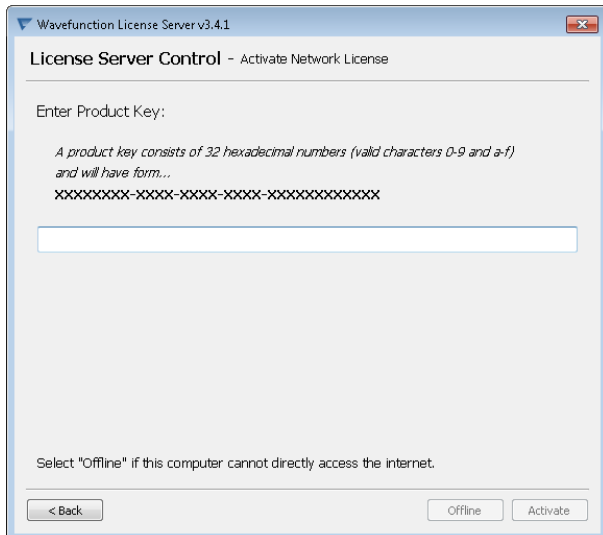

Installing License Server Control The license server machine can be a Windows (7 or higher, 64-bit only) or Macintosh (Mavericks or higher). **If use of a virtual machine is necessary, Wavefunction supports VM's as license managers for network licenses or client machines under current maintenance, or for annual site licenses. Contact sales@wavefun.com if you plan to use virtual machines with our software.**

1) Download/install/run the Wavefunction Network License Server Control Program:

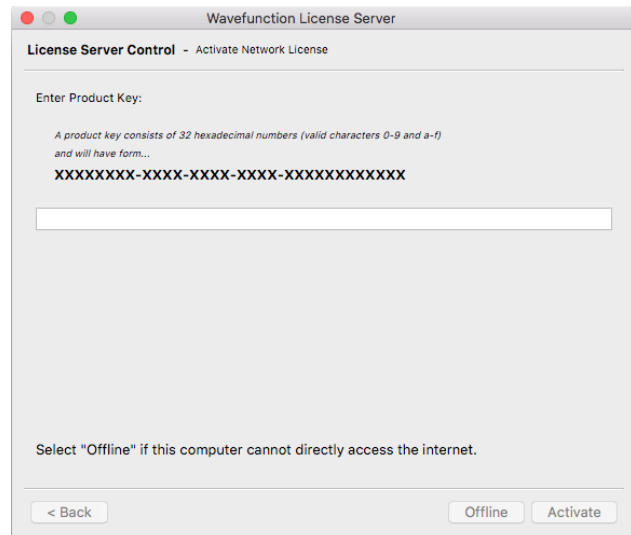

[Wavefunction Downloads Page](#)

Installation will also install the current Sentinel Run-time Environment. If an older version is found you may be prompted to remove this and install the latest version.

2) Enter your Network License Product Key, and click Activate:

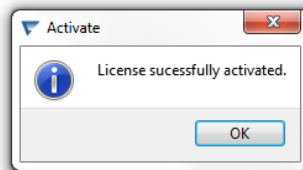

Windows version

Macintosh version

3) Successful activation will be confirmed with the message:

4) If you have existing Wavefunction licensing, click the Update button. You will be prompted to choose an Update method (either a Product Key or a Key Update File). Select the option you were provided with and click Next. You will either be prompted to provide your Product Key and to Activate, or to Browse and Open your Key Update file and Apply the file. Either will result in updating your licensing and the changes will be reflected in the License Server Control Program.
